

## LIST OF FIGURES

	<u>Page</u>
1. The Neuse and Pamlico River Estuaries in North Carolina, showing locations of fish kills associated with the newly discovered toxic dinoflagellate, <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) .....	3
2. Locations of fish kills associated with <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) in the Pamlico Estuary .....	4
3. General protocol for sampling the water in fish kill areas for <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) .....	7
4. The complex life cycle of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) as it is presently known .....	17
5. Response of the toxic flagellated vegetative (dinospore) stage of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) to a salinity gradient .....	28
6. Lethality of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) to the standard bioassay species, tilapia ( <i>Oreochromis mossambica</i> ), at varying salinities .....	29
7. Time required for the dinospore stage of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) to kill the test species, tilapia, under varying light .....	30
8. Response of abundant stages of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) to a light gradient .....	31
9. Response of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) gametes to phosphate, nitrate, and ammonium enrichments .....	33
10. Response of abundant stages of <i>Pfiesteria piscimorte</i> (nov.gen., nov.sp.) to N <sub>i</sub> /P <sub>i</sub> supply ratios .....	34
